Forecast For Northeast England
Issued by Met Office Exeter
at 0400 on Wednesday 13 Jan 2021

++ Valid for broadcast between 0600 and 1800

Headline:
Rain moving slowly eastwards, turning to sleet and snow overnight.

Today:
A dry and frosty start to the day with some hazy sunshine. Becoming cloudy during the afternoon, with patchy rain pushing eastwards whilst falling onto frozen surfaces, giving a significant risk of ice, particularly over higher ground. Maximum temperature 3 deg C (37 deg F).

Tonight:
Rain becoming heavier and persistent during the evening, turning gradually to sleet at low levels but snow over high ground. Some significant accumulations expected. A cold night. Minimum temperature 0 deg C (32 deg F).

Thursday:
Outbreaks of rain, snow over high ground, slowly easing through the day and becoming very patchy by the evening. Additional accumulations expected over high ground. Remaining cold. Maximum temperature 3 deg C (37 deg F).

Outlook for Friday to Sunday:
Cold on Friday, with early morning frost and isolated fog patches. Windy with heavy rain on Saturday morning. Breezy though largely dry thereafter, with occasional sunshine Saturday afternoon and Sunday.
